to go and
get my

I will because
this extra physical
activity by body will help me
get into a better shape,
and be a good breaker man.

Maurice Koffmanello

Ideas can be clear, or easy to understand
if an idea is clear then it can be simple
or easy to understand.

But what does the word 'understand' mean anyway?
When someone understands something, then
what is it that they understand, so to speak?

Humans can understand different ideas or concepts.

Ideas and concepts can be about different things -
for instance I could understand physical concepts
i.e. a concept or idea that is about
a concrete object.

Or I could understand ideas that are about
other types of information.

Ideas could be about other people, people
that you like or hate (dislike), or other
things that someone could think about,

OK so this means that humans or people
can think about different stuff.
When someone thinks about something
an idea forms in their head.
